

2- what's the difference between compiled and interpreted languages and in this way what about Csharp?

Compiled languages: are converted to machine code before running

Interpreted languages : are translated and run while the program is running

C# is a compiled language, It is compiled into Intermediate Language (IL), then the CLR runs it

3- Compare between implicit, explicit, Convert and parse casting

Implicit: C# converts the value automatically

Explicit: We convert the value manually using casting, like (int)

Convert: Used to convert between different data types

Parse: Used to convert a string into a specific type, like int.Parse()

فهم ال Stack وال Heap في #C

وأنا بتعلم #C، من الحاجات اللي وقفت معايا شوية موضوع ال Stack وال Heap، خصوصًا الفرق بين Value Types و Reference Types

ببساطة:

Value Type

زي int و double و bool

القيمة نفسها بتتخزن في ال Stack لما تكون local variable.

مثال:

```
int x = 10
```

هنا ال 10 نفسها موجودة في ال Stack

Reference Type

زي ال class وال object

ال variable بيكون فيه reference بيوصل لل object اللي موجود في ال Heap

مثال:

```
()Person p = new Person
```

هنا p بيشار على ال object الموجود في ال Heap
